Paige Baltzan

Business Driven Information Systems Paige Baltzan, Amy Phillips, Kathy Lynch, Peter Blakey, 2009 Business Driven Information Systems (BDIS) took the US market by storm in its first edition thanks to cutting edge content and an unparalleled range of technical resources. Australian and New Zealand academics have optimised the text for the global and local environment whilst retaining its content and technology strengths. The Baltzan and Phillips approach firstly discusses various business initiatives and secondly outlines how technology supports those initiatives. The premise for this unique approach is that business initiatives drive technology choices in a corporation. This approach takes difficult and often intangible MIS concepts, brings them down to the students' level, and applies them using a hands-on approach to reinforce the concepts. BDIS provides the foundation that will enable students to achieve excellence in business whether they major in operations management, manufacturing, sales or marketing. BDIS is designed to give students the ability to understand how information technology can be a point of strength in an organisation. As educators, Baltzan and Phillips know that time is a scarce resource for lecturers. So, they have built MIS Forum - an online forum that hosts additional current content and links to topical news clips that can be used in lectures. Students can bring the whole thing together by applying their skills to an online cohesion case - the Broadway Cafe. Here lecturers can assign pre-made individual or group assignments as students take the role of small business owners with MIS challenges.

Business Information Systems Paul Bocij, Andrew Greasley, Simon Hickie, 2008 A comprehensive introduction to the technology, development and management of business information systems. The book assumes no prior knowledge of IS or IT, so that new concepts and terms are defined as clearly as possible, with explanations in the text, and definitions at the margin. In this fast-moving area, the book covers both the crucial underpinnings of the subject as well as the most recent business and technology applications. It is written for students on any IS, BIS or MIS course from undergraduate to postgraduate and MBA level within a Business or Computer Science Department.

Essentials of Business Driven Information Systems Robert Spradley, 2014-12-02 An information system (IS) is a system composed of people and computers that processes or interprets information. The term is also sometimes used in more restricted senses to refer to only the software used to run a computerized database or to refer to only a computer system. The plural term information systems (construed as singular) is also used for the actual academic study of the field, in other words for the study of complementary networks of hardware and software that people and organizations use to collect, filter, process, create and distribute data. Any specific information system aims to support operations, management and decision making. In a broad sense, the term is used to refer not only to the information and communication technology (ICT) that an organization uses, but also to the way in which people interact with this technology in support of business processes. Some authors make a clear distinction between information systems, computer systems, and business processes. Information systems typically include an ICT component but are not purely concerned with ICT, focusing instead on the end use of information technology. Information systems are also different from business processes. Information systems help to control the performance of business processes. Alter argues for advantages of viewing an information system as a special type of work system. A work system is a system in which humans and/or machines perform work (processes and activities) using resources to produce specific products and/or services for customers. An information system is a work system whose activities are devoted to processing (capturing, transmitting, storing, retrieving, manipulating and displaying) information. As such, information systems inter-relate with data systems on the one hand and activity systems on the other. An information system is a form of communication system in which data represent and are processed as a form of social memory. An

information system can also be considered a semi-formal language which supports human decision making and action. Information systems are the primary focus of study for organizational informatics.

Information Systems Efrem G. Mallach, 2020-02-04 Most information systems textbooks overwhelm business students with overly technical information they may not need in their careers. This textbook takes a new approach to the required information systems course for business majors. For each topic covered, the text highlights key Take-Aways that alert students to material they will need to remember during their careers. Sections titled Where You Fit In and Why This Chapter Matters explain how the topics being covered will impact students on the job. Review questions, discussion questions, and summaries are also included. This second edition is updated to include new technology, along with a new running case study. Key features: Single-mindedly for business students who are not technical specialists Doesn't try to prepare IS professionals; other courses will do that Stresses the enabling technologies and application areas that matter the most today Based on the author's real-world experience Up to date regarding technology and tomorrow's business needs This is the book the author—and, more importantly, his students—wishes he had when he started teaching. Dr. Mallach holds degrees in engineering from Princeton and MIT, and in business from Boston University. He worked in the computer industry for two decades, as Director of Strategic Planning for a major computer firm and as co-founder/CEO of a computer marketing consulting firm. He taught information systems in the University of Massachusetts (Lowell and Dartmouth) business schools for 18 years, then at Rhode Island College following his retirement. He consults in industry and serves as Webmaster for his community, in between hiking and travel with his wife.

Business Information Systems Graham Curtis, David Cobham, 2008 This text focuses on the information needs and management perspectives required in a business environment, exploring the nature of information and its use in managerial decision making processes.

Business Information Systems Paul Bocij, Dave Chaffey, Andrew Greasley, Simon Hickie, 2006 Guides students through choosing, developing and managing information systems to achieve business aims. In modern business, good development and management of business information systems are central to the success or failure of the organisation. Starting from first principles, this book provides you with the knowledge needed to understand: the technology of business information systems, the development of efficient and reliable business information systems, the strategic use of information systems for effective management and competitive advantage. This third edition has completely updated coverage of contemporary topics like security, knowledge management and new technologies and continues to develop the practical skills that students need for problem solving and designing systems in the real world. Frequent business examples, case studies and web-links bring the subject alive and there are a wealth of questions, exercises and further reading both in the book and online at www.pearsoned.co.uk/bis which help students to check their understanding, complete assignments and prepare for exams.

Business Information Systems is ideal for students taking a course in Business or Management Information Systems, Business Information Technology or Computer Science. Linking technology and management has never been easier. This is a great book, containing almost everything a business student should know about Information Systems. - Dr. R.H.J. Ronken, Department of Accounting and Information Management, Faculty of Economics and Business Administration, Maastricht University About the authors: Paul Bocij has developed teaching materials for colleges and universities around the World and as a consultant he regularly advises a number of major organisations on IS issues, including design, development, security and training. He is an active researcher and the author of over twenty books. Dr Dave Chaffey has 15 years experience of developing information management solutions in industry and education. Dave is visiting lecturer at the Universities of Cranfield, Leeds and Warwick. Andrew Greasley lectures in Information Systems, Operations Management and Simulation Modelling at Aston Business School, Aston University. Simon Hickie lectures in Business Information Systems in the University of Derby's Derbyshire Business School. He is also a Senior Academic Counsellor and Head of Operations for the second year of the University's Combined Subject Programme.

Business Information Systems Paul Beynon-Davies, 2013-08-30 This core textbook provides a comprehensive and focused introduction for business students to the application of IS in organisations, using a systems-theory approach, with extensive examples, case studies and online videos to bring the topic alive. Terminology is admirably clear and topics are interconnected so that students get a sense of the whole, not a series of isolated issues. This new edition of Business Information Systems hones the framework and approach developed in the first edition, retaining its best features and making improvements to aid student engagement and learning. Written by a highly experienced lecturer and researcher, this will be essential reading for undergraduate, postgraduate and MBA students taking modules in information management systems in business.

Introduction to Business Information Systems Rolf T. Wigand, Peter Mertens, Freimut Bodendorf, Wolfgang König, Matthias Schumann, 2003-05-21 After describing the functions of the PC and the role of computers in local and global networks, the authors explain the fundamentals of data management, as well as the support of firms' functions and processes through information processing. The concepts utilized are deployed in a multitude of modern and integrated application systems in manufacturing and service industries. These application examples make up the core of the book. Many application examples illustrate the methodologies addressed.
