The Architecture of Pica Ciamarra Associati Antonietta Iolanda Lima, 2019-04 Since 1970, based in an isolated building situated on the peninsula of Posillipo, Pica Ciamarra Associati ([www.pcaint.eu](http://www.pcaint.eu)) has acted as a laboratory of architectural and urban design which has gradually incorporated new members and new energies over the time: using a multidisciplinary approach, the roots of the architectural practice lie in the intensive theoretical and practical work begun in the early 1960s by Massimo Pica Ciamarra. Since then the practice has been marked by a continuous relationship with Le Carré Bleu Feuille internationale d'architecture and leading members of the cultural milieu of Team 10: this has led to constant attention to everything that lies beyond form, to the relationship with contexts that also include non-spatial contexts, and to high levels of integration and dialectical discussion. According to Pica Ciamarra Associati, a design transcends the approaches of a single sector, providing simultaneous solutions to contradictory requirements, combining utopia and practicality. The poetics of the fragment: it mediates between architecture and the urban dimension; some designs also have the aim of becoming absorbed within a context as 'informed fragments'. This monograph is the result of an intensive period of work and consists of two interacting parts. It stems from research into the archive of the studio Pica Ciamarra and conversation with the members of the architectural practice. Organised diachronically, the book tells the long story, unfolding over a period of over fifty years of a team of Neapolitan architects and designers, who have maintained the lively spirit of the practice which is still geared towards the future. The textual and iconographic account tells a story and offers an interpretation that highlights the vibrant atmosphere of the studio, based on a consistency of thought and action, and fuelled by an interest in many different forms of knowledge. The contextualisation of the events related to the studio, as they unfolded over time, is wide-ranging, coherent and connotative. Antonietta Iolanda Lima, professor of history of architecture at the University of Palermo, has always tried, through theory, teaching and design, to disseminate the importance of history which can embrace innovation and tradition to an equal degree, forming a new architectural language. According to her view of architecture, history and

design are closely connected, a 'single entity' as is reflected by her career. Since the 1980s, her academic work has gained increasing importance, a way of avoiding narrow sectoral approaches in the training of future architects, offering a holistic stance of the history of architecture and an architecture that contributes to shaping critical thought and a thriving cultural life.

*The Spirit of Utopia*, 2000-08 I am. We are. That is enough. Now we have to start. These are the opening words of Ernst Bloch's first major work, *The Spirit of Utopia*, written mostly in 1915-16, published in its first version just after the First World War, republished five years later, 1923, in the version here presented for the first time in English translation. *The Spirit of Utopia* is one of the great historic books from the beginning of the century, but it is not an obsolete one. In its style of thinking, a peculiar amalgam of biblical, Marxist, and Expressionist turns, in its analytical skills deeply informed by Simmel, taking its information from both Hegel and Schopenhauer for the groundwork of its metaphysics of music but consistently interpreting the cultural legacy in the light of a certain Marxism, Bloch's *Spirit of Utopia* is a unique attempt to rethink the history of Western civilizations as a process of revolutionary disruptions and to reread the artworks, religions, and philosophies of this tradition as incentives to continue disrupting. The alliance between messianism and Marxism, which was proclaimed in this book for the first time with epic breadth, has met with more critique than acclaim. The expressive and baroque diction of the book was considered as offensive as its stubborn disregard for the limits of disciplines. Yet there is hardly a discipline that didn't adopt, however unknowingly, some of Bloch's insights, and his provocative associations often proved more productive than the statistical account of social shifts. The first part of this philosophical meditation--which is also a narrative, an analysis, a rhapsody, and a manifesto--concerns a mode of self-encounter that presents itself in the history of music from Mozart through Mahler as an encounter with the problem of a community to come. This we-problem is worked out by Bloch in terms of a philosophy of the history of music. The self-encounter, however, has to be conceived as self-invention, as the active, affirmative fight for freedom and social justice, under the sign of Marx. The second part of the book is entitled *Karl Marx, Death and the Apocalypse*. I am. We are. That's hardly anything. But enough to start.

**The Mathematics Teacher in the Digital Era** Alison Clark-Wilson, Ornella Robutti, Nathalie Sinclair, 2013-12-08 This volume addresses the key issue of the initial education and lifelong professional learning of teachers of mathematics to enable them to realize the affordances of educational technology for mathematics. With invited contributions from leading scholars in the field, this volume contains a blend of research articles and descriptive texts. In the opening chapter John Mason invites the reader to engage in a number of mathematics tasks that highlight important features of technology-mediated mathematical activity. This is followed by three main sections: An overview of current practices in teachers' use of

digital technologies in the classroom and explorations of the possibilities for developing more effective practices drawing on a range of research perspectives (including grounded theory, enactivism and Valsiner's zone theory). A set of chapters that share many common constructs (such as instrumental orchestration, instrumental distance and double instrumental genesis) and research settings that have emerged from the French research community, but have also been taken up by other colleagues. Meta-level considerations of research in the domain by contrasting different approaches and proposing connecting or uniting elements

**Physics of Semiconductor Devices** Massimo Rudan, 2014-12-11 This book describes the basic physics of semiconductors, including the hierarchy of transport models, and connects the theory with the functioning of actual semiconductor devices. Details are worked out carefully and derived from the basic physics, while keeping the internal coherence of the concepts and explaining various levels of approximation. Examples are based on silicon due to its industrial importance. Several chapters are included that provide the reader with the quantum-mechanical concepts necessary for understanding the transport properties of crystals. The behavior of crystals incorporating a position-dependent impurity distribution is described, and the different hierarchical transport models for semiconductor devices are derived (from the Boltzmann transport equation to the hydrodynamic and drift-diffusion models). The transport models are then applied to a detailed description of the main semiconductor-device architectures (bipolar, MOS). The final chapters are devoted to the description of some basic fabrication steps, and to measuring methods for the semiconductor-device parameters.

**A Scientific Theory of Culture and Other Essays** Bronislaw Malinowski, 2015-12-01 Malinowski presents in this book his definitive statement of the theory of functionalism. As the essential clue to the understanding of human behavior, primitive and civilized, he analyzes the functional principle that culture is an examination of the fundamentals of anthropology for the purpose of constructing a general system to explain the facts of culture by this principle. Originally published 1944. **The Psychology of Counterfactual Thinking** David R. Mandel, Denis J. Hilton, Patrizia Catellani, 2007-05-07 This book provides a critical overview of significant developments in research and theory on counterfactual thinking that have emerged in recent years and spotlights exciting new directions for future research in this area. Key issues considered include the relations between counterfactual and casual reasoning, the functional bases of counterfactual thinking, the role of counterfactual thinking in the experience of emotion and the importance of counterfactual thinking in the context of crime and justice.

*Strangers at Our Door* Zygmunt Bauman,2016-06-20 Refugees from the violence of wars and the brutality of famished lives have knocked on other people's doors since the beginning of time. For the people behind the doors, these uninvited guests were always strangers, and strangers tend to generate fear and anxiety precisely because they are unknown. Today we find ourselves confronted with an extreme form of this historical dynamic, as our TV screens and newspapers are filled with accounts of a 'migration crisis', ostensibly overwhelming Europe and portending the collapse of our way of life. This anxious debate has given rise to a veritable 'moral panic' - a feeling of fear spreading among a large number of people that some evil threatens the well-being of society. In this short book Zygmunt Bauman analyses the origins, contours and impact of this moral panic - he dissects, in short, the present-day migration panic. He shows how politicians have exploited fears and anxieties that have become widespread, especially among those who have already lost so much - the disinherited and the poor. But he argues that the policy of mutual separation, of building walls rather than bridges, is misguided. It may bring some short-term reassurance but it is doomed to fail in the long run. We are faced with a crisis of humanity, and the only exit from this crisis is to recognize our growing interdependence as a species and to find new ways to live together in solidarity and cooperation, amidst strangers who may hold opinions and preferences different from our own.

**Social Psychology and Politics** Joseph P. Forgas,Klaus Fiedler,William D. Crano,2015-04-17 Social psychology and politics are intricately related, and understanding how humans manage power and govern themselves is one of the key issues in psychology. This volume surveys the latest theoretical and empirical work on the social psychology of politics, featuring cutting-edge research from a stellar group of international researchers. It is organized into four main sections that deal with political attitudes and values; political communication and perceptions; social cognitive processes in political decisions; and the politics of intergroup behavior and social identity. The contributions address such exciting questions as how do political attitudes and values develop and change? What role do emotions and moral values play in political behavior? How do political messages and the media influence political perceptions? What are the psychological requirements of effective democratic decision making, and why do democracies sometimes fail? How can intergroup harmony be developed, and what is the role of social identity in political processes? As such, this volume integrates the role of cognitive, affective, social and cultural influences on political perception and behavior, offering an overview of the psychological mechanisms underlying political processes. It provides essential reading for teachers, students, researchers and practitioners in areas related to power, social influence and political behavior.

*Extreme Right Activists in Europe* Bert Klandermans,Nonna Mayer,2006 Since the 1980s, one of the main political

changes in Western Europe has been the electoral upsurge of extreme right-wing parties. This book examines who joins the extreme right and why?

**The Country of the Blind** George Sylvester Counts,1970

*Aesthetics of the Virtual* Roberto Diodato,2012-11-15 Arguing that the virtual body is something new—namely, an entity that from an ontological perspective has only recently entered the world—Roberto Diodato considers the implications of this kind of body for aesthetics. Virtual bodies insert themselves into the space opened up by the famous distinction in Aristotle's *Physics* between natural and artificial beings—they are both. They are beings that are simultaneously events; they are images that are at once internal and external; they are ontological hybrids that exist only in the interaction between logical-computational text and human bodies endowed with technological prostheses. Pursuing this line of thought, Diodato reconfigures classic aesthetic concepts such as mimesis, representation, the relation between illusion and reality, the nature of images and imagination, and the theory of sensory knowledge.

**Traces** Ernst Bloch,Anthony A. Nassar,2006 Collects aphorisms, essays, stories, and anecdotes, and enacts the author's interest in showing how attention to traces can serve as a mode of philosophizing. In an example of how the literary can become a privileged medium for philosophy, his chief philosophical invention is to begin with what gives an observer pause.

**Exploring the City** Ulf Hannerz,1980 A bold attempt to provide a coherent and unified theoretical understanding of urbanism that draws upon history, sociology, and geography, to bring intellectual unity to the history and development of urban anthropology.
