Active Protective Coatings Anthony E. Hughes, Johannes M.C. Mol, Mikhail L. Zheludkevich, Rudolph G. Buchheit, 2016-03-01 This book covers a broad range of materials science that has been brought to bear on providing solutions to the challenges of developing self-healing and protective coatings for a range of metals. The book has a strong emphasis on characterisation techniques, particularly new techniques that are beginning to be used in the coatings area. It features many contributions written by experts from various industrial sectors which examine the needs of the sectors and the state of the art. The development of self-healing and protective coatings has been an expanding field in recent years and applies a lot of new knowledge gained from other fields as well as other areas of materials science to the development of coatings. It has borrowed from fields such as the food and pharmaceutical industries who have used, polymer techniques, sol-gel science and colloidosome technology for a range of encapsulation techniques. It has also borrowed from fields like hydrogen storage such as from the development of hierarchical and other materials based on organic templating as “nanocontainers” for the delivery of inhibitors. In materials science, recent developments in high throughput and other characterisation techniques, such as those available from synchrotrons, are being increasingly used for novel characterisation – one only needs to look at the application of these techniques in self-healing polymers to gauge the wealth of new information that has been gained from these techniques. This work is largely driven by the need to replace environmental pollutants and hazardous chemicals that represent risk to humans such as chromate inhibitors which are still used in some applications.

Migration and Social Protection in Europe and Beyond (Volume 1) Jean-Michel Lafleur, Daniela Vintila, 2020-10-30 This first open access book in a series of three volumes provides an in-depth analysis of social protection policies that EU Member States make accessible to resident nationals, non-resident nationals and non-national residents. In doing so, it discusses different scenarios in which the interplay between nationality and residence could lead to inequalities of access to welfare. Each chapter maps the eligibility conditions for accessing social benefits, by paying particular attention to the social entitlements that migrants can claim in host countries and/or export from home countries. The book also identifies and compares recent trends of access to welfare entitlements across five policy areas: health care, unemployment, family benefits, pensions, and guaranteed minimum resources. As such this book is a valuable read to researchers, policy makers,

government employees and NGO's.

Drugs and Violence Mario De la Rosa,Elizabeth Y. Lambert,Bernard A. Gropper,1990

Laser Fundamentals ,2005-10-24 The three volumes VIII/1A, B, C document the state of the art of Laser Physics and Applications. Scientific trends and related technological aspects are considered by compiling results and conclusions from phenomenology, observation and experience. Reliable data, physical fundamentals and detailed references are presented. In the recent decades the laser beam source matured to a universal tool common to scientific research as well as to industrial use. Today a technical goal is the generation of optical power towards shorter wavelengths, shorter pulses and higher power for application in science and industry. Tailoring the optical energy in wavelength, space and time is a requirement for the investigation of laser-induced processes, i.e. excitation, non-linear amplification, storage of optical energy, etc. According to the actual trends in laser research and development, Vol. VIII/1 is split into three parts: Vol. VIII/1A with its two subvolumes 1A1 and 1A2 covers laser fundamentals, Vol. VIII/1B deals with laser systems and Vol. VIII/1C gives an overview on laser applications.

Psychology of Gender Through the Lens of Culture Saba Safdar,Natasza Kosakowska-Berezecka,2015-04-29 This unique collection brings a rarely-seen indigenous and global perspective to the study of gender and psychology. Within these chapters, researchers who live and work in the countries and cultures they study examine gender-based norms, values, expression, and relations across diverse Western and non-Western societies. Familiar as well as less-covered locations and topics are analyzed, including China, New Zealand, Israel, Turkey, Central America, the experience of refugees, and gendered health inequities across Africa such as in the treatment of persons with HIV. Included, too, are examples of culturally appropriate interventions to address disparities, and data on the extent to which these steps toward equality are working. Structurally, the volume is divided into three sections. The first two parts of the book take readers on a journey to different regions of the world to illustrate the most recent trends in research concerning gender issues, and then outline present implications and future prospects for the psychological analysis of both gender & culture. The third section of the book has an applied perspective and focuses on the cultural norms and values reinforcing gender equality as well as cultural and social barriers to them. A sampling of the topics covered: Sexual orientation across culture and time. A broader conceptualization of sexism in Poland. An analysis of gender roles within the family in Switzerland Modern-day dowries in South Asian international arranged marriages. The current state of gender equality in the United States of America. Socio-cultural determinants of gender disparity in Ghana. *Psychology of Gender Through the Lens of Culture* is a milestone toward core human rights and goals worldwide, and a critical resource for psychologists, sociologists, anthropologists, gender studies researchers, public policy makers and all those interested in promoting gender equality throughout the world.

Women's Narratives and the Postmemory of Displacement in Central and Eastern Europe Simona

Mitroiu,2018-10-15 This volume explores the different mechanisms and forms of expression used by women to come to terms with the past, focusing on the variety and complexity of women's narratives of displacement within the context of Central and Eastern Europe. The first part addresses the quest for personal (post)memory from the perspective of the second and third generations. The touching collaboration established in reconstructing individual and family (post)memories offers invaluable insights into the effects of displacement, coping mechanisms, and resilience. Adopting the idea that the text itself becomes a site of (post)memory, the second part of the volume brings into discussion different sites and develops further this topic in relation to the creative process and visual text. The last part questions the past in relation to trauma and identity displacement in the countries where abusive regimes destroyed social bonds and had a lasting impact on the people lives.

Quantification of Tannins in Tree and Shrub Foliage Harinder P.S. Makkar,2013-04-17 Here is the most complete guide available for the analysis of tannins. A battery of tannin methodologies is presented in a simple, clear and easy-to-

understand manner. This unique guide covers chemical, biological and radio isotopic tannin assays. Comprehensive step-by-step protocols are presented for each method. The protocols enable non-specialists and specialists alike to implement the methods easily in the laboratory. It is an ideal laboratory manual for research scientists, graduate students, and laboratory personnel working in the fields of animal nutrition, soil nutrient management, wild life-plant interactions, and plant breeding.

The Cambridge Companion to Feminist Literary Theory Ellen Rooney,2006-07-06 Feminism has dramatically influenced the way literary texts are read, taught and evaluated. Feminist literary theory has deliberately transgressed traditional boundaries between literature, philosophy and the social sciences in order to understand how gender has been constructed and represented through language. This lively and thought-provoking Companion presents a range of approaches to the field. Some of the essays demonstrate feminist critical principles at work in analysing texts, while others take a step back to trace the development of a particular feminist literary method. The essays draw on a range of primary material from the medieval period to postmodernism and from several countries, disciplines and genres. Each essay suggests further reading to explore this field further. This is the most accessible guide available both for students of literature new to this developing field, and for students of gender studies and readers interested in the interactions of feminism, literary criticism and literature.

The Guide to Modern Cupping Therapy Shannon Gilmartin,2017-09 An ancient alternative technique that has found its right place in the modern world of healing. In recent years countless high profile athletes and celebrities have been sporting distinctive circular cupping welts on their bodies -- the back and shoulder area being most common. Dating back thousands of years, cupping is a form of alternative medicine. The cups create suction and help with pain, inflammation, blood flow, deep relaxation and can even provide relief for sciatica and sinus congestion. Massage Cupping body therapy is a modern and modified version of cupping therapy that creates suction and negative pressure through the use of both stationary and moving cups. These cups are available at pharmacies and do not use heat like old-fashioned glass cupping -- making them entirely safe and easy for home use. Shannon Gilmartin is a licensed and nationally certified massage therapist and certified vacutherapies educator who teaches this wonderfully diverse therapy and has witnessed the positive outcomes for patients. This book shares all her extraordinary professional and hands-on experience, so that everyone can experience the positive benefits of cupping. Nearly 200 step-by-step photos and full color pages make it easy to follow this expert instruction. The

book includes: The history of cupping, the types of cups and the many therapeutic benefits of cupping from skeletal and muscular to the digestive and nervous systems What to expect after a cupping session including comprehensive safety and techniques information Applications for common conditions that range from stress and back tension to frozen shoulder, carpal tunnel syndrome, TMJD (temporomandibular joint dysfunction) and even acid reflux A section for speciality applications like athletic performance, prenatal therapy and working with inflammation (acute vs. chronic). A comprehensive and easy-to-read cupping therapy book, with plenty of practical suggestions. This must be one of the best cupping therapy books I have seen recently published. -- Ilkay Zihni Chirali, Author of Traditional Chinese Medicine Cupping Therapy

Essential Bioinformatics Jin Xiong, 2006-03-13 Essential Bioinformatics is a concise yet comprehensive textbook of bioinformatics, which provides a broad introduction to the entire field. Written specifically for a life science audience, the basics of bioinformatics are explained, followed by discussions of the state-of-the-art computational tools available to solve biological research problems. All key areas of bioinformatics are covered including biological databases, sequence alignment, genes and promoter prediction, molecular phylogenetics, structural bioinformatics, genomics and proteomics. The book emphasizes how computational methods work and compares the strengths and weaknesses of different methods. This balanced yet easily accessible text will be invaluable to students who do not have sophisticated computational backgrounds. Technical details of computational algorithms are explained with a minimum use of mathematical formulae; graphical illustrations are used in their place to aid understanding. The effective synthesis of existing literature as well as in-depth and up-to-date coverage of all key topics in bioinformatics make this an ideal textbook for all bioinformatics courses taken by life science students and for researchers wishing to develop their knowledge of bioinformatics to facilitate their own research.
